RADON FACT SHEET

Maps and tables are not intended to be used to determine if a home in a given area should be tested for radon. Homes with elevated levels of radon have been found in all areas of the state. **All homes should be tested regardless of geographic location.**

- Radon is the leading cause of lung cancer deaths in the U.S. for non-smokers.
- Radon is estimated to cause over twenty one thousand (21,000) radon-related deaths from lung cancer each year in the U.S. (EPA estimate).

Red= High Potential for radon in soil
Orange= Moderate Potential for radon in soil

Proposed or enacted legislation

IN Indiana Code §§ 16-41-38-1-10 Requires the state to establish a certification program for radon professionals and requires the state to use any relevant standards or requirements concerning radon gas established by the U.S. EPA.

IN Indiana Code §§ 32-21-5-1-12 Requires sellers of property containing 1-4 dwelling units to complete a Seller's Residential Real Estate Sales Disclosure form.

Indiana Totals Comparison 2011 – 2013

There is NO safe level of radon in your home. Your individual Risk for lung cancer increases with higher levels of radon gas and increased exposure. The following table estimates your lifetime risk of lung cancer death due to long-term exposure to radon.

Radon Level Annual Average	Lung Cancer Risk For people who Never Smoked	Lung Cancer Risk For people who Smoke
20 pCi/L	36 out of 1,000	260 out of 1,000
10 pCi/L	18 out of 1,000	150 out of 1,000
8 pCi/L	15 out of 1,000	120 out of 1,000
4 pCi/L	7 out of 1,000	62 out of 1,000
2 pCi/L	4 out of 1,000	32 out of 1,000
